
EDUCATION

- **GLA University** Mathura, Uttar Pradesh
Bachelor of Technology in Computer Science & Engineering 2023 – 2027

TECHNICAL SKILLS

- **Languages:** Python, Go, Java, JavaScript, TypeScript, SQL
Backend: Node.js, Express.js, REST APIs, WebSockets, Socket.IO
Frontend: React.js, Next.js, Tailwind CSS
Databases: PostgreSQL, MongoDB, Redis
DevOps & Tools: Docker, Git, GitHub Actions, Linux, Postman

EXPERIENCE

- **RadheRahi** India
Freelance Website Developer May 2026 – Present
 - Engineered a full-stack vehicle rental platform end-to-end for real-world business operations, spanning 3 core modules: rental workflows, user management, and an admin dashboard.
 - Architected backend APIs and database workflows across 4 resource domains – vehicles, rentals, users, and admin operations – then tested, debugged, and configured the app for production deployment.
- **W3grads** GLA University
Smart Full-Stack Development Trainee Jun 2025 – Jul 2025
 - Built Bartly, a remote barter-exchange platform using React and Express, implementing REST APIs, database integration, authentication, and deployment during a 45-day full-stack development program.

PROJECTS

- **DuecIt Real-Time Coding Duel Platform** [Github] [Live] *Go, Next.js, Chi, Redis, WebSockets*
 - Designed a modular Go backend separating 4 independent service layers: authentication, matchmaking, judging, and duel management.
 - Implemented real-time matchmaking and duel synchronization with Redis-backed queues and WebSockets, including ELO-based match management and JWT/OAuth 2.0 authentication, load-tested to support 350 concurrent users.
 - Developed a concurrent code-evaluation pipeline with goroutines and `WaitGroups` to run test cases in parallel and calculate weighted scores.
- **Backstory Consistency Checker** [Github] *Python, TF-IDF, Rule-Based NLP*
 - Created a rule-based pipeline for a hackathon that decomposes character backstories into atomic, weighted claims and retrieves supporting evidence from full-length novel text.
 - Applied TF-IDF passage retrieval over chunked, overlapping novel text to surface relevant evidence for each claim.
 - Devised pattern-based claim evaluation using 4 signal types – negation detection, contradiction markers, keyword overlap, and deterministic aggregation – validated against a manually labeled benchmark.
- **Bastard E-Commerce Platform** [Code] [Live] *React, Express.js, MongoDB, REST APIs*
 - Shipped a full-stack e-commerce platform spanning 5 core features – authentication, product catalog, cart, order management, and reviews – with secure Cashfree checkout integration.
 - Developed REST APIs across 4 resource types – authentication, products, orders, and reviews – using Express.js, MongoDB, and JWT authorization, with role-based admin tools for inventory and order tracking.
 - Resolved CORS, DNS, and environment-configuration issues to ship and maintain the live deployment across two platforms, Vercel and Render.

ACHIEVEMENTS & LEADERSHIP

- **LeetCode:** Solved 250+ Data Structures & Algorithms problems.
- **Football Club President:** Led the university football club and won [N] intercollege tournaments.
- **Developer Tooling:** Published Projgen, a programmable project-scaffolding CLI, as an npm package supporting global installation and `npx`.
